

GigE+ Fiber Optic Network

Delivered by Independents Fiber Network

When Patients Are Relying on You You Can Count on GigE+ Fiber Optic Network.

Our team of experts delivers custom data connectivity solutions for Healthcare providers through our GigE+ Fiber Optic Network and in partnership with our providers.

We understand that healthcare providers are in the midst of an always changing environment not only in patient care, but also in their information technology network that is used to support them and their healthcare operations. This is an opportunity for healthcare organizations to invest in their technology foundation—setting the stage for future growth and better managed costs. GigE+ Fiber Optic Network can be an important part of your technology foundation.

Immediate Access When You Need it.

As a healthcare provider you rely on having medical data and patient information at your fingertips. Critical data such as patient prescriptions, medical history and x-rays provide a more complete picture for healthcare providers. That's why our GigE+ Fiber Optic Network is built with redundancy—to provide you with fast and reliable data connectivity when you and your patients need it most.

Connectivity for **Multiple Locations.**

Advances in healthcare have allowed for an increase in the number of specialty areas such as diagnosis, treatment and an increase in outpatient surgical facilities. This leads to the need for real-time communication and information access across multiple facilities 24/7. Our network professionals are experts at working with healthcare IT management to connect you to our existing network and also create custom network connections where it is needed.

“When Physicians in Northwest Ohio needed access to electronic medical records such as x-rays and lab results at the local hospital, Independents Fiber Network provided a custom point-to-point network connection between the doctors’ offices and the hospital. They now have real time access to patient information over our GigE+ network which is helping to improve their productivity and patient care.”
